KwiKool Iceberg....it’s not just another spot cooler!

True - Air Conditioning Matching Capacity to Heat Load
Balanced Condenser Airflow: Separate cold air supply from condenser air flows
Condenser air is isolated to the area above the ceiling. Cold air is recirculated and not removed from the room.

Spot Coolers - Appropriate for Comfort Spot Cooling
Unbalanced Airflow: Very inefficient for controlling temperature
Condenser air is pulled from the room creating negative pressure, which pulls in hot unconditioned outside air.

Commercial & Industrial Use • Air / Water-Cooled Units • Available in 1 to 10-ton • Manufactured in USA • Distributorships Available
